

Community Air Monitoring Program
02/02/09 through 02/08/09

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 02/02/09 through 02/08/09 there were six Fixed and two Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for TVOC and PM10 data remained in Operational Condition.**

On Monday, February 2, 2009 there were elevated concentrations of dust for a total of twelve minutes at FAM-4. These elevated concentrations were caused by regional influences and all background concentrations were increased as well. This dust was not associated with intrusive activities; therefore the site remained in the Operational Condition (less than the Action Limit).

The elevated concentrations are shown on the following two tables.

PM₁₀ = Respirable Particulate Matter (dust)
TVOC = Total Volatile Organic Compound
ppm = Parts per million (by volume)
µg/m³ = Micrograms per cubic meter

¹ Data collection interrupted while FAM4 was moved, PAM2 collected data during move in vicinity of FAM4 (1051-1341).

² Highlighted values indicate dates and locations that require further comparison to the action limits based on wind direction, off site and on site activities (see Table 2)

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.
Odor Intensity is measured 0-8 on the n-butanol scale.
