

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 2/15/10 through 2/21/10 there were six Fixed and one Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for PM₁₀ and TVOC data remained in the Operational Condition.**

On Monday, February 15, 2010 there was a period of elevated PM₁₀ concentrations at Fixed Air Monitoring Site 3 (FAM 3). The elevated PM₁₀ concentrations were caused by a laborer sweeping the main site (FAM 3) trailer. The activity was stopped and concentrations quickly dropped below the Alert and Action Limits. Background concentrations were great enough to reduce all the elevated PM₁₀ concentrations below the Action Limit. Therefore the site remained in the Operational Condition (Particulate levels less than the Action Limit).

PM₁₀ = Respirable Particulate Matter (dust)

TVOC = Total Volatile Organic Compound

ppm = Parts per million (by volume)

µg/m³ = Micrograms per cubic meter

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.

ND = No Data

NA = Not Applicable

¹ Highlighted values indicate dates and locations that require further comparison to the Action Limits based on wind direction, off site and on site activities (see next table)

² PAM 1 not transmitting data, AECOM attempting to recover data.

* Wind Directions are presented by octant (i.e. N, NE, E, SE, S, SW, W, NW)

** Background concentrations are equal to the upwind concentrations unless winds are determined to be variable.

¹ The elevated concentrations (after background subtraction) were not greater than the Action Limit; therefore, the site remained in the Operational Condition.
