

Community Air Monitoring Program
03/30/09 through 04/05/09

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 03/30/09 through 04/05/09 there were six Fixed and one Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for TVOC and PM10 data remained in Operational Condition.**

On Monday, March 30, 2009 there were elevated concentrations of dust for two minutes at FAM-3. These elevated concentrations were caused by sheet driving in the vicinity of FAM-3. Dust suppression was instituted and PM₁₀ levels quickly dropped; therefore the site remained in the Operational Condition (less than the Action Limit).

The elevated concentrations are shown in the following tables.

PM₁₀ = Respirable Particulate Matter (dust)
TVOC = Total Volatile Organic Compound
ppm = Parts per million (by volume)
µg/m³ = Micrograms per cubic meter

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.
Fixed Air Monitoring Station

¹ Data collection interrupted for PM₁₀ on Friday, 4/3/09 at all sites except FAM 4 and PAM 1 due to heavy precipitation.
PM₁₀ instrument at FAM 5 remained inoperative until start up cal on 4/6/09

² Highlighted values indicate dates and locations that require further comparison to the action limits based on wind direction, off site and on site activities (see Table 2)

Weekly Elevated Concentration above the Action Limit Summary Report

* Wind Directions are presented by octant (i.e. N, NE, E, SE, S, SW, W, NW)

¹ In accordance with DER-10 this type of event is not considered to be an exceedance because levels were not above the action limit after background concentration was applied..

** Background concentrations are equal to the upwind concentrations unless winds are determined to be variable.

FAM – Real time fixed air monitoring station

PAM – Real time portable air monitoring station

NA – Not applicable

ND – No data available

VAR – Variable winds

PM₁₀ – Particulate matter (reported in $\mu\text{g}/\text{m}^3$)

TVOC – Total volatile organic compound (reported in ppm)
