

Community Air Monitoring Program
05/11/09 through 05/17/09

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 05/11/09 through 05/17/09 there were six Fixed and one Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for TVOC and PM10 data remained in Operational Condition.**

On Saturday, May 16, 2009 between 6:15 AM and 6:52 AM there were periods of elevated PM₁₀ concentrations for 38 minutes caused by high moisture conditions (rain) which interfered with the true measurement of PM₁₀ at all six FAM locations. The PM₁₀ concentrations were not associated with ground intrusive activities (no work on site) and concentrations diminished when the rain ended. Additionally, background concentrations reduced all of the elevated concentrations below the action limit; therefore the site remained in the Operational Condition (less than the Action Limit and or were not associated with ground intrusive activities).

The elevated concentrations are shown on the following two tables.

PM₁₀ = Respirable Particulate Matter (dust)

TVOC = Total Volatile Organic Compound

ppm = Parts per million (by volume)

µg/m³ = Micrograms per cubic meter

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.

¹ Highlighted values indicate dates and locations that require further comparison to the action limits based on wind direction, off site and on site activities (see Table 2)

² Manual data recovery being attempted.

* Wind Directions are presented by octant (i.e. N, NE, E, SE, S, SW, W, NW)

** Background concentrations are equal to the upwind concentrations unless winds are determined to be variable.

FAM – Real time fixed air monitoring station

PAM – Real time portable air monitoring station

NA – Not applicable

ND – No data available

VAR – Variable winds

PM₁₀ – Particulate matter (reported in $\mu\text{g}/\text{m}^3$)

TVOC – Total volatile organic compound (reported in ppm)

¹ In accordance with DER-10 this type of event is not considered to be an exceedance because the elevated concentrations were not associated with ground intrusive activities and/or did not exceed the Action Limit.
