

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 06/06/11 through 06/12/11 there were six Fixed Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for PM₁₀ and TVOC data remained in the Operational Condition.** However, there were elevated concentrations above the Action Limit as described in the following paragraph.

On Thursday, June 9, 2011 there was a period of elevated PM₁₀ concentrations at Fixed Air Monitoring Site 2, 3, 4, 5 and 6 (FAM 2, FAM 3, FAM 4, FAM 5 and FAM 6). The elevated concentrations were caused by atmospheric conditions (high relative humidity). Each elevated concentration was reduced below the Alert and Action Limit after background subtraction. Therefore, the site remained in the operational condition (see Table 2).
