

Community Air Monitoring Program
08/10/09 through 08/16/09

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 08/10/09 through 08/16/09 there were six Fixed and one Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for PM₁₀ data remained in Operational Condition.**

On Thursday, August 13, 2009 there was an elevated PM₁₀ concentration at Fixed Air Monitoring Site 5 (FAM 5) for one minute caused by an idling excavator, truck traffic, and a portable generator in the vicinity of FAM 5. Background concentrations were great enough to reduce the elevated concentration below the Action Limit; therefore the site remained in the Operational Condition (less than the Action Limit and or were not associated with ground intrusive activities).

The elevated concentrations are shown in the following two tables.

PM₁₀ = Respirable Particulate Matter (dust)

TVOC = Total Volatile Organic Compound

ppm = Parts per million (by volume)

µg/m³ = Micrograms per cubic meter

All reported PM₁₀, TVOC, and odor intensity values represent 15-minute averages.

NA = ND No Data

NA = Not Applicable

¹ Highlighted values indicate dates and locations that require further comparison to the action limits based on wind direction, off site and on site activities (see Table 2)

² Periods of PM₁₀ invalid due to sample line condensation caused by low shelter temperature interfering with PM₁₀ measurements

* Wind Directions are presented by octant (i.e. N, NE, E, SE, S, SW, W, NW)

** Background concentrations are equal to the upwind concentrations unless winds are determined to be variable.

¹ In accordance with DER-10 this type of event is not considered to be an exceedance because the elevated concentrations did not exceed the Action Limit.
