

Community Air Monitoring Program
10/19/09 through 10/25/09

Community air monitoring data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits”. As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition”. The “Operational Condition” is applicable when the data is below the “Action Limits” noted in the table below. The “Action Condition” occurs when one or more fifteen minute average measurement for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC), Naphthalene or Odor Intensity exceeds the background or upwind measurement by the “Action Limits” in the table below. During the period from 10/19/09 through 10/25/09 there were six Fixed and one Portable Air Monitoring locations measuring TVOC and PM₁₀. **Fifteen-minute averages for PM₁₀ and TVOC data remained in the Operational Condition.**

On Thursday, October 22, 2009 there were elevated PM₁₀ concentrations at Portable Air Monitoring Site 1 (PAM 1) for fourteen minutes caused by an unknown source. Background concentrations were quite high and were great enough to reduce the elevated concentrations below the Action Limit. Therefore the site remained in the Operational Condition (less than the Action Limit).

The elevated concentrations are shown in the following two tables.
