

Weekly Community Air Monitoring Program Update

Location: National Grid – Former Rockaway Park MGP Site, Bulkhead Area

Period: Baseline – October 14 through October 16, 2015

CAMP data is reviewed and compared to specific NYSDEC/NYSDOH approved criteria, known as “Action Limits.” As a result of this evaluation process, site conditions are categorized into two categories, “Operational Condition” and “Action Condition.” The “Operational Condition” is applicable when the data is below the “Alert, Response and Action Limits”, and means that normal operations can continue. The “Action Condition” occurs when one or more of the fifteen minute average measurements for Dust (PM₁₀), Total Volatile Organic Compounds (TVOC) or Odor Intensity are greater than the background or upwind measurement by the specified “Action Limits.” Reaching an Action Level requires corrective action or stopping work until the condition is addressed or abates. During the period from October 14, 2015 through October 16, 2015, four portable CAMP stations were in-use and measured TVOC and PM₁₀. **Fifteen-minute averages for TVOC and PM₁₀ data remained below the Action Limit.**
